Note: Space for own room for every child = every member of the household has their own room, not including kitchen and bathroom. If members are married or cohabiting, the room requirement is reduced by one room (crowded living conditions norm 3). The norm is calculated from all housing. Municipality groups are according to divisions from the Swedish Association of Local Authorities (see appendix 1). For a definition of the different types of municipalities and the concepts of manual worker and non-manual worker, see appendix 1.
